

DUG IN BOAT DOCK LAYOUTS

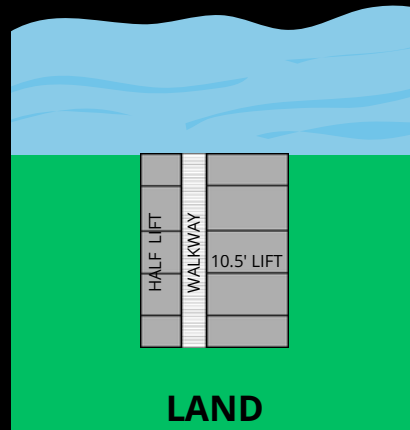

Dug-in boat docks extend approximately 24' into your property, offering several walkway configurations to accommodate your waterfront needs. Walkways are typically 3' wide but can be constructed up to 5' wide. Because the dock is installed into the shoreline, access is generally available around the boat lifts, providing additional convenience and usable space.

Explore the layout options below for our two walkways compatible dug-in dock sizes: one-and-a-half and double. Each diagram provides an overhead view of the dock and its available walkway configurations.

ONE-AND-A-HALF

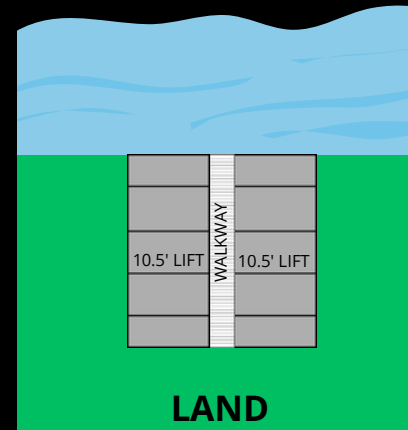

ONE 10.5' WIDE LIFT
ONE 6-7' WIDE LIFT

DOUBLE

TWO 10.5' WIDE LIFTS
